

CDM Digital Audit Tool

Quick Start Guide

v1.0 | 2026

What is it?

The CDM Digital Audit Tool is a browser-based compliance checklist built specifically for CDM 2015. It replaces paper forms and Excel spreadsheets with a structured digital checklist covering Pre-start / Mobilisation and Construction Phase requirements — including photo evidence capture, a running action log and PDF report export.

No software	Works offline	Photo evidence
Opens in any browser. Nothing to install or update.	No internet required once loaded. Use on site anywhere.	Take or attach photos directly against each checklist item.
PDF export	Action log	Monthly copy
One-tap report generation. Ready to share or file.	Track open actions, owners and due dates in one place.	Copy last month's report as a starting point. Update and re-assess.

This tool saves data to your browser's local storage on the device you are using. It does not sync to the cloud. Each device maintains its own saved reports. Always export a copy of your data before clearing data or switching devices.

Getting Started

1**Open the tool**

Open the HTML file in Chrome, Safari or Edge. On mobile, use Chrome (Android) or Safari (iPhone). No login or installation required.

2**Fill in project details**

Complete the project header — Project Title, Project Number, Principal Designer, Principal Contractor, Client Rep / PM, Check Date, Check Type and Report Month. These populate the exported PDF report automatically.

3**Select your phase**

Choose Pre-start / Mobilisation or Construction Phase using the tabs. Work through each section, selecting Y (Yes — in place), N (No — issue identified) or N/A against every applicable item.

4**Add notes and photos**

Tap "Add notes / photo" under any item to record evidence, actions or comments. On mobile, the camera opens directly so you can photograph site conditions against the relevant check.

5**Log actions**

Switch to the Running Action Log tab. Add any issues raised, assign an owner, enter the date raised and the target completion date. The dashboard tracks open and overdue actions automatically.

6**Export your report**

Tap "Export report" to generate a formatted PDF. The report includes project details, all checklist items with their status and comments, and the full action log. Print or save as required.

7**Save for next month**

Tap "Save this month" before finishing. Next month, use "Copy previous month" to load the previous report as a starting point — statuses and notes carry over so you only update what has changed.

The Checklist

What it covers

The checklist is structured around the two key phases of CDM 2015 compliance. Each item includes its timing requirement so you know when each check should be completed.

Pre-start / Mobilisation

F10 & Key Personnel

- F10 notification in place (incl. updates)
- Key project personnel identified
- Principal Designer appointed
- Designer (Civil) appointed
- Designer (Electrical) appointed
- Principal Contractor appointed
- Contract Partners identified and competent

SHE Plan & Programme

- Pre-Construction SHE Information issued (4 weeks before)
- Enabling Works SHE Plan in place
- Construction Phase SHE Plan received and accepted
- RACI confirmed with Work Programme
- Principal Contractor's Organisation Chart
- Contract Partner CVs — competency confirmed
- Site Induction Presentation prepared
- Start/Finish dates identified

Meetings & Visits

- SSEN/Client Construction Phase Site Visit Meetings developed
- Project Progress Meetings scheduled
- Site Mobilisation Visit completed
- Pre-Start Meeting completed

Construction Phase

- Site Establishment (16 items) — access, compound, welfare, emergency plans, ESQCR, traffic management
- Site Supervision & Documentation (10 items) — induction, RAMS, SHE folder, operative register
- Management & Risk (10 items) — CPP management, risk register, incident reporting, temporary works

Status Buttons & Action Log

Understanding the status buttons

Y	Yes — In place	The requirement has been met and is in place at the time of the check.
N	No — Issue identified	The requirement is not met. Add a note and create an action in the Running Action Log.
N/A	Not applicable	The requirement does not apply to this project. Add a brief note explaining why if appropriate.
X	Clear selection	Removes the current selection. Items can be left blank with a comment if preferred.

Running Action Log

The Running Action Log tracks all issues raised during the audit. For every item marked N, create a corresponding entry in the log with a clear action description, the responsible owner and a target date.

Field	What to enter
Action required	Clear description of what needs to be done
Action owner	Name or role of the person responsible
Date entered	Date the issue was identified
Date due	Target completion date — overdue items turn amber
Date completed	Enter when closed — counts toward the Closed total

Tips for best results

- Complete project details in full before starting the checklist — they appear on every exported report.
- Work through sections in order — the timing labels on each item tell you when it should be checked.
- Photograph evidence on site using the camera button — photos are stored against the specific checklist item.
- Export a PDF at the end of every session as your permanent record.
- Use "Save this month" before closing — this is how monthly carry-forward works.
- Items can be left blank with a comment — use the clear (x) button if you select in error.
- The dashboard counts update in real time — use them to confirm all items have been assessed before exporting.

Limitations & Support

What this tool does not do

Limitation	Detail	Workaround
No cloud sync	Data saves to browser local storage only. Does not sync between devices.	Export PDF after each session. Use one device per project.
No multi-user access	Multiple people cannot work on the same report simultaneously.	Designate one device per site visit. Share PDF reports as needed.
No browser backup	Clearing browser site data or cache will delete saved reports.	Always export PDF before clearing browser data.
Not a legal document	This tool aids compliance monitoring. It does not replace professional CDM advice or official documentation.	Use alongside your CDM procedures and seek professional advice as required.
PDF photos	Photos attached to items are stored in the browser but do not currently embed in the exported PDF.	Keep photos separately or attach to a project file alongside the exported report.

Browser compatibility

Browser	Desktop	Mobile	Notes
Chrome	Recommended	Recommended	Best experience on all platforms
Safari	Supported	Recommended (iOS)	Best choice on iPhone/iPad
Edge	Supported	Supported	Windows users
Firefox	Supported	Supported
